

Debriefing Sheet

Title: Navigation Preference in Storytelling

This document is the debriefing text that will be emailed to any participants who request details of the overall aims of the research project in which they participated. In order not to influence those volunteers who have not participated in the study, this debriefing sheet will only be sent out after all the experiment sessions have been completed.

Subject: Navigation Preference in Storytelling

You are receiving this information because you have participated in the empirical study on **Navigation Preference in Storytelling**.

Thank you again for your support to this research. This experiment was designed to investigate the preference of study participants in navigating a presentation system. Understanding how humans understand and interact with such a presentation system can help us discover design principles for storytelling systems. In particular, this study allows us to examine how different presentation styles, such as text passages, bullet points, visualization images, and photographs, may affect the navigation paths followed by participants.

In the study, participants' experience using the designed presentation system was observed through the collected data, which is being analyzed. We hope that we will gain some insight about how humans understand and interact with a presentation system for storytelling.

Once again, thank you for taking the time to participate in this research. Should you have any further questions regarding this research, please feel free to contact me.
